

MASTERPLAN FOR RESIDENTIAL RETAINING WALLS OF HERCULES STANDARD AND MEGA MODULES

ALTERNATE FOOTING DETAIL
FOR 6' 0" HERC. STD. WALL

ALTERNATE CONCRETE
FOOTING DETAIL FOR
ANY HERCULES STD. WALL

Ground should be level for at least 6' 0" back from wall

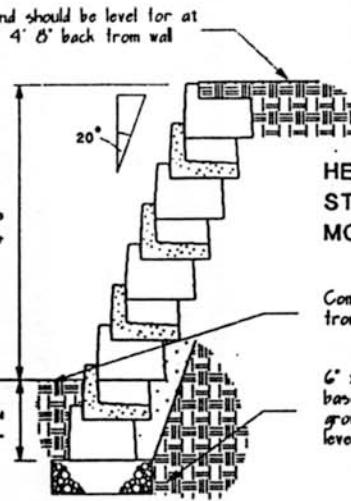

CLEAN GRANULAR
BACKFILL

Ground should be level for at least 4' 0" back from wall

HERCULES
STANDARD
MODULES

Compact ground in front of wall

6' x 18" poured in place
concrete footing.

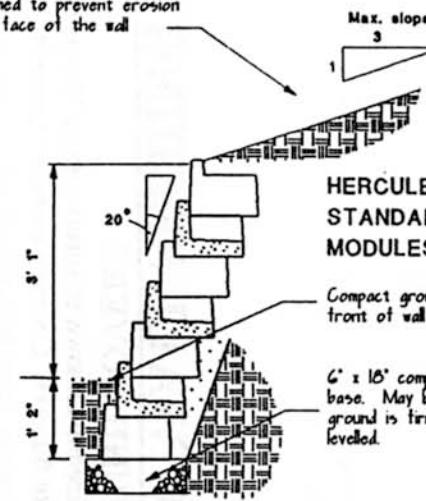

A runoff collection swale can be formed to prevent erosion at the face of the wall

HERCULES
STANDARD
MODULES

Compact ground in front of wall

6' x 18" compacted gravel base. May be omitted if ground is firm and easily leveled.

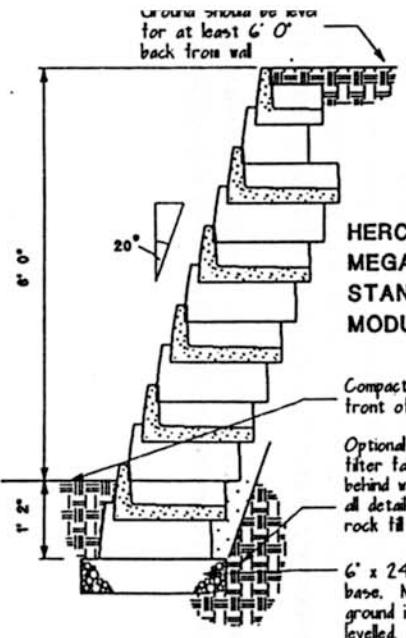

Max. slope
3

HERCULES
STANDARD
MODULES

Compact ground in front of wall

6' x 18" compacted gravel base. May be omitted if ground is firm and easily leveled.

Ground should be level for at least 6' 0" back from wall

ALTERNATE CONCRETE
FOOTING DETAIL - for
Hercules Mega walls shown

6' x 24" poured in place
concrete footing.

1' lip

HERCULES
MEGA and
STANDARD
MODULES

Compact ground in front of wall

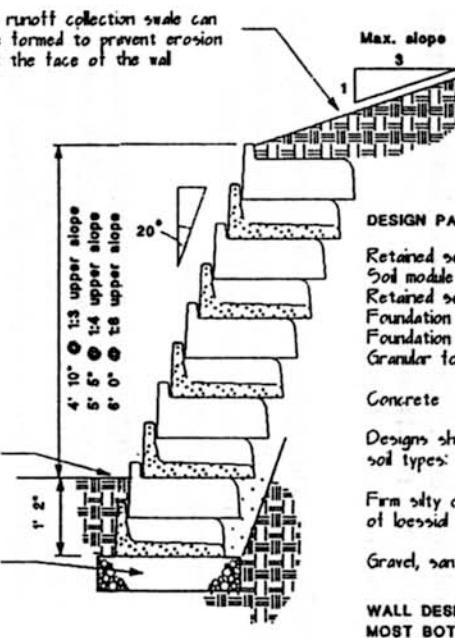

Optional drainage layer with filter fabric - limits water buildup behind wall in heavy clays - all details. Otherwise use soil or rock fill to modules and behind wall.

6' x 24" compacted gravel base. May be omitted if ground is firm and easily leveled.

HERCULES
MEGA
MODULES

Compact ground in front of wall

6' x 24" compacted gravel base. May be omitted if ground is firm and easily leveled

FOUNDATION NOTES

Using the concrete footing detail with a 1' lip will save one course of modules in the foundations (see detail).

Using the Mega Module for the footing with the 6' 0" Std. wall will avoid using a concrete footing for this wall.

DESIGN PARAMETERS

| | |
|------------------------------|------------|
| Retained soil density | 120 psf |
| Soil module infill density | 100 psf |
| Retained soil PH angle | 25 degrees |
| Foundation soil PH angle | 25 degrees |
| Foundation soil adhesion | 250 psf |
| Granular foundation PH angle | 34 degrees |

| | |
|----------|---------------------------|
| Concrete | $f'_c = 3000 \text{ psi}$ |
|----------|---------------------------|

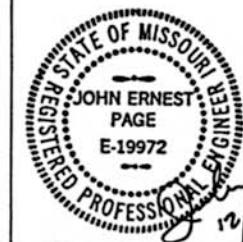

Designs shown are suitable for the following soil types:

Firm silty clays typical of the firmer silty clays of loessial origin occurring in the St. Louis area

Gravel, sand, or gravelly or sandy clays

WALL DESIGNS ARE NOT SUITABLE FOR MOST BOTTOM LAND SOILS

The Engineers seal (above) on this drawing attests only to the possibility of the detailed construction for the theoretical parameters used. Any person attempting to use these details is cautioned to hire the services of an engineer experienced in soil and foundation work. Building code authority inspectors should take particular care to ensure that conditions in the field do not vary from those indicated for the construction type shown.
